

# VITALISING ICT RELEVANCE IN AGRICULTURAL LEARNING

## Smart Farming: A Case of Automatic Cow Milking System

Dr. Sc. Asmir Gogic, associate professor

Workshop, Tuzla 29-30.09.2020.

- ▶ **World population** in 2018 was 7.6 billion, **by 2030** it will be **8.5 billion** and 9.7 billion by 2050 and exceed 11 billion in 2100.
- ▶ Rapid growth in world population **requires** mass and **efficient food production** worldwide.
- ▶ Sustaining population growth requires a **smarter farming approach**.
- ▶ **Smart Farming:** application of ICT technologies in order to achieve an optimized farming system.
- ▶ ... by utilizing the **technological advancements**, smart farming strives to **reduce workload** of farmers and improve their quality of life.
- ▶ Smart **farming technologies** can be categorized into three following groups: autonomous robots, sensors and Internet of Things.

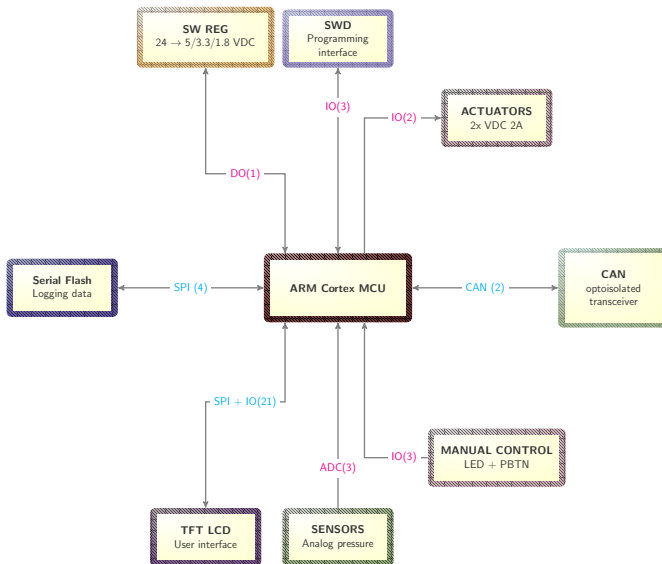

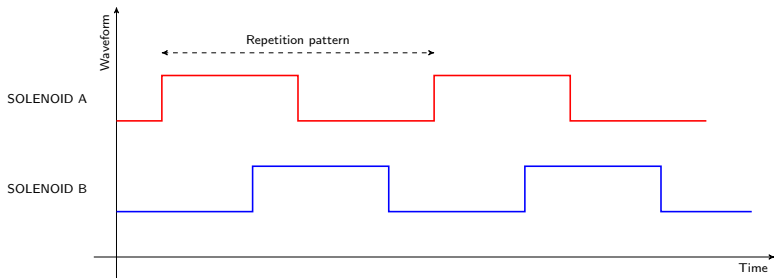

- ▶ ... besides the traditional machinery it includes **electronic devices** specifically designed to monitor and **improve** the plants and **live stock growth**.
- ▶ Wide range of **sensors**: environmental (water, pressure, temperature), soil composition (analysis of chemical elements), air quality (gas sensors), light spectrum (intensity, UVB, UVC, IR...), wind...
- ▶ Wireless and wired **communication networks** (transceivers) to reach remote locations.
- ▶ Data mining and analysis in order to improve the growth and quality of farming.

- ▶ **Improve milking process** for animal and farmer.
- ▶ Node **remote control**: activity monitoring, process parameter adjustment and firmware upgrade.
- ▶ **Scalability**: allow for many nodes (100+) to be controlled.
- ▶ ...easily control the duration and milking profile.
- ▶ **Plug and Play**: simple installation and maintenance.
- ▶ **Safety guides**: AC power utilization prohibited...
- ▶ Offline event logging...
- ▶ Expected network throughput per node: 10-100 Bps.
- ▶ ...wired or wireless network?

- ▶ Options for communication **network protocol**: CAN, LIN, RS485, MODBUS, Ethernet,...
- ▶ CAN selected due to simple network structure and transceiver/controller chip price.

- ▶ ARM Cortex 32 bit MCU with external serial flash for offline logging.
- ▶ Optoisolated CAN transceiver,
- ▶ 3x Pressure sensors and 2x actuators 60VDC/2A,
- ▶ TFT LCD graphic interface.
